

**001017***KeySafe Over-the-door-mount - Pushbuttons*

### **Overview**

The KeySafe Over-the-door-mount provides convenient, managed access to stored keys. Its specific design offers an alternative installation method and fits conveniently into doorframes for both fixed and temporary key holding. It can be used to allow quick and easy access to homes, offices, businesses,...

The code can be changed anytime for added security.

### **Construction and installation**

The KeySafe is made of zinc alloy with a powder-coat finish. The back of the KeySafe protects against damaging the doorframe. A metal bracket is used to attach it on different types of doors using the appropriate screws (not provided). Proper installation is important for security reasons.

### **Operation**

Slide the 'Clear' switch down to reset the buttons.  
Push the appropriate combination code.  
Press down the 'Open' switch and remove the lid.  
After use of the key, enter the code again, press down the 'Open' button and place the lid back.  
Release the 'Open' button and the lid will be locked.

### **Applications**

Residential applications: emergency entry, vacation homes.

Business applications: temporary and fixed keyholding for subcontractors at construction sites.

### **Guidelines**

When programming your access code, we recommend that you NEVER use a birth year or other obvious combination code. A combination consisting of between 5 and 7 digits is recommended.

Please remember that KeySafe is a convenience product, not a security product.

### **Standard Features**

- **Easy-to-use key box**
- **Mount inside doorframes or on top of doors**
- **Change combination as often as needed - 1024 different code combinations possible**
- **Holds up to 5 keys**

# 001017
